This package contains the software specifications for the HP-JetSend network architecture. It consists of a .ZIP file containing the following files:

JetSend.CTX.WhatIs.pdf	This is an overview of JetSend that places the network portions into context.
JetSend.CTX.ADK.pdf	This is the Application Development Kit overview that provides additional context and detail to what is provided in CTX.WhatIsJetSend.pdf.
JetSendNetworkArchitecture.pdf	This is the Architecture Reference Specification. It describes all the network components as an integrated whole.
JetSendOSP.pdf	This is the External Reference Specification for the Session Protocol. It describes the protocol from a functional point-of-view.
JetSendRMTPAPI.pdf	This is the External Reference Specification for the Application Programming Interface that gives access to the Transport Protocol.
JetSendRMTP.pdf	This is the External Reference Specification for the Transport Protocol. It describes the protocol from a functional point-of-view.
JetSendTIAPI.pdf	This is the External Reference Specification for the Application Programming Interface that isolates the underlying Network Protocol from the Transport Protocol. It is the technology that makes the Transport Protocol and all higher layered protocols device independent.
JetSendPacketMarshalling.pdf	This is the Internal Reference Specification for the method of creating and managing internal packet buffers as they flow up and down the network stack.
